**CONCURRENCE FOR NO FURTHER ACTION
SIGNATURE PAGE**

From 1999 through 2004, the Navy, in partnership with the U.S. Environmental Protection Agency (USEPA) (Region III) and Virginia Department of Environmental Quality (VDEQ), conducted desktopevaluations, site visits, and reviews of aerial photographs for the following Installation Restoration Program Areas of Concern (AOCs) at St. Juliens Creek Annex (SJCA) in Chesapeake, **Virginia**:

AOC 13 - PCP Dip Tanks

AOC 14 - Building 89

AOC K - Former Sewage Treatment Plant

In addition, field investigations were performed for the AOCs and the results were documented in the *Final Site Screening Assessment Report* and *Site Screening Assessment Report Addendum* (CH2M HILL, June 2004). As appropriate, facility background, historical site data, constituent concentrations, human health risks, and ecological risks were evaluated and the documentation for closeout is summarized in the referenced document. Based upon the AOC reviews and evaluations, it is the consensus of the Project Management Team, defined as representatives of the Department of Navy, US EPA (Region III), and VDEQ, that these AOCs require no further action (NFA) under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended. In the event that new data becomes available that suggests the potential for contamination posing an unacceptable risk to human health or the environment after execution of the NFA concurrence, the Project Management Team agrees to reevaluate the AOCs as deemed necessary.
